Florida Production Engineering wishes to announce the addition of our Asheboro, NC facility that will focus upon the design, development and manufacture of industrial and medical products. Processes include injection molding, automation and numerous secondary operations. Cleanroom capability plus certifications including ISO 13485:2003, ISO 9001-2008 and FDA Registered allows FPE to provide a wide range of services to the industrial, medical, pharmaceutical and food industries. FPE was fortunate to be able to acquire a portion of the assets of the former Moll Industries and also maintain key personnel that have the expertise required to support and grow the business. In addition to the added molding capability, we can now combine the overall engineering capabilities and synergies of this group with the total company to provide complete development capabilities.

This enhances our recent growth in medical and industrial products as we continue to diversify our overall customer base. As we enhance our molding capability and footprint to improve customer logistics, FPE continues to focus on improving our overall value added proposition.
